RESEARCH INTERESTS

Keywords: Computational Physics, Soft Matter, Biophysics, Statistical Mechanics, Inverse Problems, Bayesian Inference

Computational and statistical modeling of complex physical systems, with particular interest in soft matter, biophysics, inverse problems, and data-driven methods.

TEACHING

Adjunct Lecturer <i>Baruch College</i>	Aug 2025 – May 2026
– Introductory Physics Lecture (PHYS 2002)	Fall 2025, Spring 2026
– Introductory Physics Laboratory (PHYS 2003)	Fall 2025
– Physics II Laboratory (PHYS 3001)	Spring 2026

EDUCATION

City University of New York (CUNY) Graduate Center M.S. in Astrophysics Thesis: <i>Starspot Inference Using Light Curve Inversion Techniques</i>	2023–2025
CUNY Baccalaureate for Unique and Interdisciplinary Studies B.S. in Computational Astrophysics, <i>cum laude</i>	2019–2022
Bernard M. Baruch College	2017–2019

RESEARCH EXPERIENCE

Starspot Inference with Light Curve Inversion Techniques

<i>American Museum of Natural History</i> <i>Advisor: Dr. Lucy Lu</i>	Aug 2023 – Sep 2025
– Developed computational pipelines for reconstructing stellar surface features from rotational photometric time series using light-curve inversion techniques.	
– Applied Bayesian inference, numerical modeling, and time-series analysis to quantify degeneracies and evaluate the reliability of recovered starspot maps.	
– Produced an M.S. thesis assessing the capabilities and limitations of inverse methods for stellar surface reconstruction.	

Towards Mapping Brown Dwarf and Giant Exoplanet Atmospheres

<i>American Museum of Natural History</i> <i>Advisor: Dr. Johanna Vos</i>	May 2021 – Aug 2023
– Developed Python workflows for processing and modeling photometric observations of brown dwarfs and directly imaged giant exoplanets.	
– Applied statistical modeling and time-series analysis to characterize rotational variability and infer the evolution of atmospheric cloud structures.	
– Presented research on computational atmospheric mapping at the American Astronomical Society and institutional research symposia.	

Chemodynamically Characterizing the Jhelum Stellar Stream with APOGEE-2

Sloan Digital Sky Survey Faculty and Student Team

May 2020 – May 2021

Advisor: Dr. Allyson Sheffield

- Developed computational workflows for identifying candidate members of the Jhelum stellar stream using APOGEE-2 spectroscopic and kinematic measurements.
- Applied statistical methods to combine chemical-abundance and dynamical information for stellar-population classification.
- Contributed to a peer-reviewed publication in *The Astrophysical Journal*.

Looking at Star Formation Through Chemistry

American Museum of Natural History

Aug 2018 – May 2020

Advisor: Dr. Allyson Sheffield

- Processed and analyzed high-resolution stellar spectra to investigate chemical signatures of star formation and stellar-population evolution.
- Developed computational workflows for spectral normalization, equivalent-width measurements, and quantitative abundance analysis.
- Compared elemental-abundance patterns across observational datasets to characterize chemically distinct stellar populations.

Two-Point Statistics in the Star-Forming Interstellar Medium

Flatiron Institute, Center for Computational Astrophysics

Jun 2018 – Aug 2018

Advisor: Dr. Chang-Goo Kim

- Applied two-point statistical methods to quantify spatial structure in numerical simulations of the star-forming interstellar medium.
- Developed Python analysis routines to examine relationships among gas dynamics, metallicity, and star formation.

PUBLICATIONS

Sheffield, Allyson A., Aidan Z. Subrahimovic, **Mohammad Refat**, et al. (May 2021). “Chemodynamically Characterizing the Jhelum Stellar Stream with APOGEE-2”. In: *The Astrophysical Journal* 913.1, p. 39. DOI: [10.3847/1538-4357/abee93](https://doi.org/10.3847/1538-4357/abee93).

Refat, Mohammad (Sept. 2025). “Starspot Inference Using Light Curve Inversion Techniques”. Master’s thesis. CUNY Graduate Center.

ACADEMIC PRESENTATIONS

Talks

“Starspot Inference with Light Curve Inversion Techniques” 2025

CUNY Masters Graduation 2025 — Flatiron Institute, Center for Computational Astrophysics

“Towards Mapping Brown Dwarf and Giant Exoplanet Atmospheres” 2022

240th American Astronomical Society Meeting — American Astronomical Society

“Towards Mapping Brown Dwarf and Giant Exoplanet Atmospheres” 2021

Center for Computational Astrophysics / City University of New York / American Museum of Natural History Symposium — Flatiron Institute, Center for Computational Astrophysics

“Chemodynamically Characterizing the Jhelum Stellar Stream with APOGEE-2” 2020

American Museum of Natural History REU Symposium — American Museum of Natural History

“Where Were Stars Born in the Milky Way?”	2019
<i>American Museum of Natural History REU Symposium</i> — American Museum of Natural History	
“Two-Point Statistics in the Star Forming ISM”	2018
<i>Center for Computational Astrophysics REU Symposium</i> — Flatiron Institute, Center for Computational Astrophysics	

Posters

“Starspot Inference with Light Curve Inversion Techniques”	2025
<i>245th American Astronomical Society Meeting</i> — American Astronomical Society	
“Star Spots with Starry”	2024
<i>22nd Cambridge Workshop on Cool Stars, Stellar Systems, and the Sun</i> — University of California San Diego	
“Towards Mapping Brown Dwarf and Giant Exoplanet Atmospheres”	2023
<i>Center for Computational Astrophysics Gotham Fest 2023</i> — Flatiron Institute, Center for Computational Astrophysics	
“Towards Mapping Brown Dwarf and Giant Exoplanet Atmospheres”	2023
<i>241st American Astronomical Society Meeting</i> — American Astronomical Society	
“Chemodynamically Characterizing the Jhelum Stellar Stream with APOGEE-2”	2021
<i>237th American Astronomical Society Meeting</i> — American Astronomical Society	

TECHNICAL SKILLS

Programming	Python, MATLAB, Bash
Scientific Computing	NumPy, SciPy, Pandas, Matplotlib, Astropy, Lightkurve, Astroquery
Computational Methods	Time-Series Analysis, Statistical Modeling, Inverse Problems, Bayesian Inference, Computational Modeling, Spectral Analysis
Software	Git, Linux, L ^A T _E X
